The Mineral Teeth

supplied by Mr. V. C. MALLAN
are adapted to the mouth with-
out the least pain, set upon

**GOLD, PLATINUM,
DENTAL ALLOY, THIONITE,
VULCANITE, CORALITE,
ELASTIC SOFT GUM,**

and all bases recognized by eminent dentists, at the lowest charges compatible with the best of workmanship and purest materials.

One of the numerous advantages which the public receive by the adaptation of Artificial Teeth by Mr. Mallan, is that, at a trifling cost, upon the loss of the patient's natural teeth, artificial ones can be added to the existing frame, thereby preventing the outlay for a new set.

The Self-fastening Teeth

fitted with flexible soft gums without the least pain or extraction of stumps, worn with the greatest comfort in the most tender mouths, obviating all bulky substances, large plates and springs, are pronounced to be the greatest boon to nervous sufferers ever introduced, restoring mastication, articulation, and improving the appearance in a few hours.

ASK YOURSELF

Is it possible for a dentist to give you proper attention, good materials, perfect fit, and thorough satisfaction, at the low charge of One Guinea? You must bear in mind that to make artificial teeth, useful for mastication, good ap-

MR. MALLAN,

to continue the success of his painless treatment, has fitted his Surgeries with all the latest and most scientific appliances, enabling his fees to be the lowest possible,

compatible with the
best workmanship
and the finest materials.

A few of the numerous advantages gained by the adaptation of Artificial Teeth without Plates

1. PERFECT CLEANLINESS.

All parts being accessible to the tooth brush.

2. CLEARNESS OF SPEECH INSURED.

There being no plate to impede the free movement of the tongue.

3. PERFECT & NATURAL APPEARANCE.

Detection by the closest observer being impossible.

4. COMFORT.

They are not to be excelled, as they occupy no more space than the natural teeth.

Other advantages too numerous to mention here, will be fully explained at a personal interview.

Copy of Guarantee

GIVEN WITH ALL TEETH SUPPLIED.

106 Edgware Road, Hyde Park.

Case No.

I hereby guarantee that the Teeth supplied to M..... are composed of chemically pure materials, which will not corrode in the mouth, change colour nor decay. Should the teeth require any attention, I shall be pleased to see you at any time and do what may be required, free of charge.

Mr. V. C. MALLAN takes this opportunity of notifying that all artificial teeth supplied receive his personal attention and supervision before they are placed in the mouth, therefore, patients can rely upon receiving the full benefits of all the latest improvements in painless dentistry.

The Reason Why.

PEOPLE often wonder why they suffer with Headache, Lowness of Spirits, Wind, Sleeplessness, Pains in the Back, and a thousand other ailments. In a few words these complaints in nine cases out of ten arise from defective mastication, causing indigestion.

Now, does it not stand to reason that a good set of Teeth must assist Mastication and Digestion, and when considered, the small cost incurred in procuring the same, no one need wonder that Doctors recommend their patients to consult a Dentist, especially when the most nervous can rely upon a Single Tooth to a complete Set being fitted without pain, the extraction of stumps not always being necessary.

MR. V. C. MALLAN

has been consulted by many patients who have been unfortunate and had teeth made which they have been unable to wear owing to bad fitting or too much bulk in the mouth. Mr. Mallan will supply teeth to anyone so placed, and will give a written undertaking to make no charge if satisfaction is not assured. Surely this is worth a trial to those who wish for teeth and are under the impression they cannot wear them.

Copied from Lloyds Newspaper, October 29th, 1911.

CAUTION!

Never, under any circumstances, allow strangers or ignorant commission agents travelling from door to door to interfere with your teeth. Apart from the dreadful ignorance of men, who under all kinds of pretences, force cheap factory made teeth upon the public, there is also the

VERY GREAT DANGER

of allowing unknown strangers to attempt work they probably know nothing about with disease-laden appliances carried in a handbag. The perfect sterilizing and extreme care necessary is not possible to men travelling from house to house. Such important work should be done in a place completely equipped for the purpose.

Just ask yourself this question? Would a respectable and competent dental practioner canvas down areas and call upon shopkeepers and at private houses for orders for dentistry; there can only be one answer,

NO.

Therefore do not for one moment entertain the idea of being talked over by such people, but avoid all risks by having nothing to do with them.

NOTE.—When calling, to prevent mistakes, note name of
